I am writing in regards to the AP Hourly Web Designer/Web Developer position as seen on the CSU Job Listing website. Primed with a plethora of education, programming experience, a devotion for binary science, and a favoritism toward lofty goals, I feel I'd make an excellent candidate for the position.

To have a look at my portfolio, I invite you to visit www.netdoodler.com and that will take you to my freelance site. I'm undergoing a process of cloning this website as a WordPress site since much of my expected work coming up is to be performed through WordPress. In addition, it took full use of the Adobe Creative Cloud to create the images and video found there.

As per the preferred qualifications, although I do enjoy using JQuery, I am just as capable of using vanilla JavaScript if required. I don't have any experience with Shibboleth; however, this is something I'm willing to practice and become acquainted with in my own time if hired!

As you will see from the enclosed resume, I have completed a Master's in Computer Information Systems from CSU as well as an Associates in Computer Science from Front Range all within the same semester. To complete the portfolio, my past work was for the USDA where I built tools for idtools.org as well as maintaining their administrator portal called Factsheet Manager (FSM) which can be found at NetDoodler under the "Folio" menu.

In the end, I do hope all that I have described in my resume does strike you convincingly enough that I do have something serious to bring to the table for you. If you have any further questions, or if you want to schedule an interview, please contact me at 970-301-3202 or maestroanth@gmail.com.

Sincerely,
