Dear Hiring,

I am writing in regards to the Web Programmer and Analyst position as seen on Indeed for the City of Fort Collins. Primed with a plethora of education, programming experience, a devotion for binary science, and a favoritism toward lofty goals, I feel I'd make an excellent candidate for the position.

As you will see from the enclosed resume, I have completed a Master's in Computer Information Systems from CSU as well as an Associates in Computer Science from Front Range all within the same semester. Since then, I've been doing freelance work with my own little business (link can be found down below) and before that I've done contractual work funded by CSU to work as a USDA web developer. For the USDA, I built tools for idtools.org as well as maintaining their administrator portal called Factsheet Manager (FSM).

I'm hoping to use this experience as a launching pad to find a more secure position either at a web development firm or a business that needs constant database/server/site care.

In the end, I do hope all that I have described in my resume does strike you convincingly enough that I do have something serious to bring to the table for your company. If you have any further questions, or if you want to schedule an interview, please contact me at 970-301-3202 or maestroanth@gmail.com. I look forward to meeting you and thank you for taking the time to review my application!

Sincerely,

-Anthony Walter
